Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Floor Bunding competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Floor bunding in this report refers to low-profile, fixed or semi-fixed containment barriers installed on floors (typically 30?150 mm high, in polyurethane, rubber, steel, aluminium or concrete) to form a liquid-tight perimeter around chemical, fuel or waste-handling areas. It is part of the secondary containment / spill-control value chain: upstream are polymers (PU, EPDM, PVC), metals and coatings; mid-stream are extrusion/moulding and steel-fabrication manufacturers plus adhesive/anchor systems; downstream are integrated EHS solution providers and installers serving workshops, warehouses, chemical plants, fuel depots and battery/waste facilities. Floor bunding is distinguished from portable berms and banded pallets by being anchored to the floor and usually rated for pedestrian, forklift or truck traffic. Typical 2024 ASPs for industrial PU or rubber floor bunding are around 40?80 USD per metre for flexible adhesive systems, and 60?120 USD per metre for heavy-duty drive-over systems based on Australian product price lists. At manufacturer level, gross margins are generally 25?40%, higher for branded engineered systems (with design/installation services) and lower for commodity extrusions sold via distributors. Floor bunding is increasingly seen as a ?must-have? rather than a ?nice-to-have? within spill control and secondary containment strategies, because it turns otherwise flat, leaky workshop and warehouse floors into controllable basins that work with sumps, drains and treatment systems instead of against them. On the demand side, tightening environmental regulation, higher penalties for soil and groundwater contamination, and stricter audits from insurers and corporate EHS teams are pushing industrial sites, logistics hubs, chemical warehouses and battery/EV facilities to harden their floors, not just their tanks and drums. Floor bunding is attractive

because it can often be retrofitted without major reconstruction, can be designed to be drive-over for forklifts and trucks, and can be integrated into broader safety upgrades such as new racking, safety cabinets and drainage redesign. At the same time, end users are looking for solutions that balance chemical resistance, mechanical robustness and ease of cleaning with a reasonable installed cost and minimal disruption to operations, which encourages the shift from ad-hoc civil works toward more standardized polyurethane, rubber or metal systems supplied by specialist manufacturers.

The global Floor Bunding market size was estimated at USD 1628.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
