Abstracts

Floor heating pipe system (also known as floor heating system) is a heating method that heats indoor air by passing a heat medium (water, steam or electricity, etc.) through a pipe system buried under the ground. The heat of the floor heating system is evenly released through the ground, thereby improving indoor comfort and avoiding the temperature difference problem caused by traditional heating methods. The working principle, composition and installation method of the floor heating system vary, but usually include several main parts such as heat source, pipes, control system, etc.

The global Floor Heating Pipe System market size was estimated at USD 1108.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
