Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Floor-standing Brain Function Monitor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Floor-standing Brain Function Monitor (Fs-BFM) is a fixed-installation neural assessment system based on high-density neurophysiological sensing and multimodal fusion analytics, comprising a modular sensor array chamber (integrating multi-channel EEG electrodes, multi-band fNIRS source-detector modules), a dynamic noise-resistant signal processing hub (equipped with ultra-precision amplifiers, multi-stage adaptive filters, and real-time artifact correction algorithms), and a human-machine interaction terminal (supporting 3D EEG topographic imaging, spatiotemporal-hemodynamic synchronized analysis). The system's rigid mechanical framework enables multi-axial adjustment and structural stability for diverse head geometries and monitoring postures, while its full-shield electromagnetic enclosure and optomechanically damped pedestal suppress environmental noise and mechanical vibration, ensuring accurate capture of microvolt-level EEG signals and micromolar-resolution hemodynamic dynamics.

The global Floor-standing Brain Function Monitor market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
