Abstracts

The development trend of floor standing dental radiography systems is focused on improving technology, efficiency, and patient comfort. The shift from traditional film-based radiography systems to digital systems is a major trend in dental radiography. Digital systems offer higher image quality, faster image acquisition, and the ability to store and share images electronically. This trend is driven by the need for more accurate and efficient diagnosis, as well as the desire to reduce radiation exposure for patients. CBCT technology is becoming increasingly popular in dental radiography. CBCT systems provide three-dimensional images of the patient's oral and maxillofacial region, allowing for more precise diagnosis and treatment planning. The development trend in this area is focused on improving image quality, reducing radiation dose, and enhancing software capabilities for better image analysis. Floor standing dental radiography systems are being designed with a focus on ergonomics and patient comfort. This includes features such as adjustable height and positioning options for the X-ray tube head, as well as comfortable patient positioning devices. The development trend in this area is aimed at improving the overall patient experience during radiographic procedures.

The global Floor Standing Dental Radiography System market size was estimated at USD 1206.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
