Abstracts

Floor-standing surgical sponge counting and detection systems are specialized technologies designed to improve surgical safety by preventing retained surgical objects (RSIs), especially sponges, from being left in the patient's body after surgery. These systems are critical because retained sponges can lead to serious complications such as infection, additional surgeries, and legal issues. Traditional manual counting methods are prone to human error, which is why automated or semi-automated detection systems are becoming increasingly popular in healthcare settings.

The global Floor-standing Surgical Sponge Counting Detection System market size was estimated at USD 48.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
