Report Overview:

A flow battery, or redox flow battery (after reduction–oxidation), is a type of rechargeable battery where recharge ability is provided by two chemical components dissolved in liquids contained within the system and separated by a membrane. Ion exchange (providing flow of electric current) occurs through the membrane while both liquids circulate in their own respective space. Cell voltage is chemically determined by the Nernst equation and ranges, in practical applications, from 1.0 to 2.2 volts. The performance of these devices is governed by the considerations of electrochemical engineering.

The Global Flow Battery Market Size was estimated at USD 208.18 million in 2023 and is projected to reach USD 341.52 million by 2029, exhibiting a CAGR of 8.60% during the forecast period.
