Report Overview

Flow control ball valves use motors to rotate a ball with a hole in the center to control flow. When the hole is in line with the flow, the valve is fully open, and when it is turned perpendicular to the flow, it is closed. Most electric ball valves don't require power to hold position like solenoid valves. Some electric actuated ball valves can be opened or closed manually. Flow control ball valves work well in situations that involve large volumes of flow. Motorized ball valves allow liquid, gas, or air through electric controls. Some have several valves to manage large systems.

The global Flow Control Ball Valves market size was estimated at USD 5573 million in 2023 and is projected to reach USD 9100.48 million by 2032, exhibiting a CAGR of 5.60% during the forecast period.
