## Abstracts

Flow control pinch valves are a type of valve that is used to regulate the flow of fluids or gases in a pipeline. These valves work by pinching or squeezing a flexible tube or sleeve, which restricts or stops the flow of the medium. The pinch valve is controlled by a mechanism that can open or close the valve, allowing for precise control over the flow rate. This type of valve is commonly used in industries such as wastewater treatment, pharmaceuticals, and food processing, where accurate flow control is essential. Flow control pinch valves are known for their reliability, durability, and ability to handle a wide range of fluids and pressures.

The global Flow Control Pinch Valves market size was estimated at USD 948.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
