Report Overview

Flow drilling screw (FDS) and driving machines represent a niche but critical segment within the fastening and joining technology market, primarily serving industries such as automotive, aerospace, and construction. FDS is a self-piercing screw designed for joining dissimilar materials, particularly lightweight metals and composites, without pre-drilling, making it ideal for modern manufacturing trends focused on lightweighting and efficiency. The driving machines, often automated or robotic, ensure precise torque control and high-speed application, aligning with Industry 4.0 and smart factory demands. Growth in this market is driven by the automotive sector's shift toward electric vehicles (EVs) and aluminum-intensive designs, where traditional welding is less viable. However, adoption faces challenges like high equipment costs and the need for skilled operators. Regional demand is strongest in North America, Europe, and Asia-Pacific, with key players including Atlas Copco, B?llhoff, and SFS Group competing on innovation in screw design and machine integration. Sustainability trends and material advancements (e.g., carbon fiber composites) are expected to further shape the market's evolution.

The global Flow Drilling Screw FDS and Driving Machine market size was estimated at USD 73.07 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.94% during the forecast period.
