Abstracts

Flow straightener is generally designed for elimination or significant reduction of stream turbulence without re-generation of velocity profile, which means that it does not create acceptable conditions of flow defined in ISO 5167-1 standard. Flow straightener contributes to elimination of large deformations of velocity profile and thus to gross errors in flow measurement. Flow straighteners, also known as flow conditioners or straightening vanes, are used to improve the flow profile and accuracy of fluid flow measurements. The market trend may be influenced by advancements in fluid dynamics research and the increasing demand for precise flow measurement in various industries.

The global Flow Straighteners market size was estimated at USD 1924.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Flow Straighteners market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
