Abstracts

Flow-through immersion coolers are highly efficient cooling devices widely used in laboratories and industrial applications. Their primary feature is the direct immersion of cooling coils into the medium, enabling rapid cooling and precise temperature stabilization. By utilizing circulating pipelines to continuously transfer the coolant, these devices ensure uniform cooling performance to meet diverse experimental or production requirements. Compared to traditional cooling methods, flow-through immersion coolers offer advantages such as faster cooling rates, precise temperature control, and a compact design. Moreover, their modular construction facilitates maintenance and scalability, making them ideal for specialized applications like cooling high-precision equipment, controlling chemical reactions, and preserving biological samples.

The global Flow-Through Immersion Coolers market size was estimated at USD 168.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
