## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flowback Surfactants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of flowback surfactants reached 58,000 tons, with an average selling price of US\$3,450 per ton. Flowback surfactants are a type of special additive used in oil, natural gas, and chemical separation processes. They are primarily used to improve the wettability, dispersion, and mass transfer efficiency of reflux liquids in equipment such as distillation towers and absorption towers, thereby enhancing separation accuracy and product purity. Their core mechanism of action is to maximize the gas-liquid contact area by reducing liquid surface tension, inhibiting foam formation, and optimizing liquid film distribution. Common types include anionic, nonionic, and zwitterionic formulations, which can be customized according to the properties of the medium.

The global Flowback Surfactants market size was estimated at USD 200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
