Abstracts

Floriculture is a branch of horticulture concerned with cultivating ornamental and flowering plants for floristry and gardens, comprising the floral industry. The growth of new varieties by plant breeding is a main occupation of floriculturists. Floriculture lighting activates several types of photoreceptors in plants to promote photomorphogenesis, photoperiodis, photosynthesis and phototropism in plants. All plants-including those that produce flowers need carbon dioxide, light, water and nutrients for growth and survival. Plants require light to catalyze the chemical reaction between water and carbon dioxide, creating the carbohydrates necessary for growth. The floral lighting market is expected to witness substantial growth over the next few years owing to increasing demand for sophisticated products and lighting technologies. Increase in flower production has increased the demand for these lights and is expected to spur market expansion. Moreover, the growing demand for floral lighting systems in vertical farming applications further supports the market growth. Light-emitting diode (LED) technology is gaining popularity in floriculture, showing great potential as a floral lighting fixture due to its cool operation, low energy consumption, and ability to tailor spectral output to emit specific wavelengths available to plants. The increasing adoption of light-emitting diode (LED) technology in the floral segment is expected to drive the growth of the market.

The global Flower Lighting Equipment market size was estimated at USD 7393.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
