Abstracts

Fluid Film Bearings, or Fluid Bearings, are bearings in which the load is supported by a thin layer of rapidly moving pressurized liquid or gas between the bearing surfaces. Since there is no contact between the moving parts, there is no sliding friction, allowing fluid bearings to have lower friction, wear and vibration than many other types of bearings. Thus, it is possible for some fluid bearings to have near-zero wear if operated correctly. Global key players of Fluid Film Bearings include RENK, Waukesha, Miba, etc. The top three players hold a share over 18%. Asia-Pacific is the largest market, and has a share about 50%, followed by Europe and North America with share 25% and 21%, separately. In terms of product type, Hydrodynamic Bearings is the largest segment, occupied for a share of 78%. In terms of application, Power Generation has a share about 34 percent.

The global Fluid Film Bearings market size was estimated at USD 3457.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
