Abstracts

Fluid therapy is a method of maintaining fluid balance by supplementing (or limiting) certain fluids. The main functions are: to supplement the loss of body fluids; to correct the hypotonic state of the body fluids and the disturbance of the acid-base balance; it can not be used to supplement the insignificant loss and the fluid needed to urinate and dilute urine. It is commonly used in clinical practice to prepare the above two types of solutions in different ratios. The global fluid therapy market encompasses a wide range of products and solutions aimed at maintaining fluid balance and addressing specific medical needs in both human and veterinary medicine. This market is influenced by factors such as advancements in medical technology, increasing prevalence of chronic diseases, growing demand for critical care treatments, and expanding veterinary healthcare services. Key market segments within the global fluid therapy market include:

- Intravenous Solutions and Sets:** This segment includes a variety of intravenous fluids such as saline solutions, dextrose solutions, and balanced electrolyte solutions, as well as the sets and devices used for intravenous administration.
- Colloid and Crystalloid Solutions:** These solutions are used for fluid resuscitation, intravascular volume expansion, and maintenance of adequate hydration in patients. Colloid solutions contain larger molecules to help retain fluid within blood vessels, while crystalloid solutions contain electrolytes and small molecules.
- Blood and Plasma Volume Expanders:** Products designed to increase the volume of circulating blood in the body, often used in cases of severe blood loss or hypovolemia.
- Dialysis Solutions:** Specifically for renal replacement therapy, including hemodialysis and peritoneal dialysis, these solutions enable the removal of waste products and excess fluids from patients with kidney failure.
- Veterinary Fluid Therapy:** Products and solutions tailored for use in veterinary medicine, addressing the specific fluid balance needs of animals across different species and medical conditions.
