Abstracts

A fluorescence navigation endoscope camera system is a specialized medical device that integrates fluorescence imaging with endoscopic technology to provide real-time visualization during minimally invasive procedures. The system uses fluorescent dyes or contrast agents that emit light when exposed to specific wavelengths, allowing surgeons to see tissues, tumors, blood vessels, and other structures with high contrast and precision. This technology enhances the ability to identify abnormal or diseased tissue, aiding in more accurate diagnostics, surgical planning, and treatment. It is commonly used in gastrointestinal, urological, and oncological surgeries, where precise visualization is critical for safe and effective treatment. By combining fluorescence imaging with endoscopic techniques, the system provides detailed, dynamic images that guide the surgeon through complex procedures, improving outcomes and reducing the risk of complications.

The global Fluorescence Navigation Endoscope Camera System market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.
