Abstracts

A fluorescence surgical navigation system is a medical imaging technology that combines fluorescence imaging with advanced navigation techniques to assist surgeons during procedures. By using fluorescent dyes or markers that emit light when excited by specific wavelengths, this system allows real-time visualization of tissues, blood vessels, and tumors in high contrast. Surgeons can use this technology to identify critical structures, accurately remove tumors, and avoid damaging healthy tissues. This system is widely used in oncology, neurosurgery, and vascular surgeries, enhancing surgical precision, improving patient outcomes, and reducing the risk of complications during surgery. The system works in conjunction with existing navigation tools, providing both anatomical and molecular information to guide the surgeon's actions.

The global Fluorescence Surgical Navigation System market size was estimated at USD 125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.
