## Abstracts

A fluorescence video endoscope is a specialized medical imaging device that combines traditional endoscopy with fluorescence imaging technology to provide enhanced visualization of tissues during minimally invasive procedures. The system uses fluorescent dyes or contrast agents that emit light when exposed to specific wavelengths, allowing for high-contrast, real-time imaging of biological structures such as tumors, blood vessels, and organs. This technology is especially valuable for identifying abnormal tissue or early-stage diseases, improving diagnostic accuracy, and assisting surgeons in precisely locating and treating diseased areas. It is widely used in oncology, gastrointestinal, and urological surgeries, among other fields.

The global Fluorescence Video Endoscope market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.
