Report Overview

Fluorescent leak detection dye is a specialized dye that fluoresces under ultraviolet (UV) or black light when exposed to specific wavelengths. It is used primarily for detecting leaks or identifying the source of leaks in various systems, including automotive, HVAC (heating, ventilation, and air conditioning), refrigeration, and industrial equipment. When the dye is added to the system, it circulates with the fluid (e.g., refrigerant, oil) and can be detected under UV light at the point where a leak is occurring. This method allows for precise and non-invasive leak detection, minimizing potential damage and downtime.

The global Fluorescent Leak Detection Dye market size was estimated at USD 185.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
