Report Overview

Fluorinated ethylene propylene (FEP) films are copolymers of tetrafluoroethylene and hexafluoropropylene. FEP films are sold under brand names Teflon FEP, Neoflon FEP, and Dyneon FEP. FEP films are highly transparent and possess low friction, higher impact strength, and non-reactivity properties. They are highly resistant to UV rays and offer excellent chemical resistance, electrical properties, and good weathering resistance. FEP films also provide high flame resistance and low-temperature toughness. FEP films possess high stress-crack resistance and can be used for application with temperature of nearly 204o C. These films are processed by injection molding, melt-extrusion techniques, compression, transfer, and blow-molding processes. FEP films are employed in various applications such as fiber optic cables, wire and cable insulation, tubing, liner for steel pipes and fittings, and coated fabrics.

The global Fluorinated Ethylene Propylene (Fep) Films market size was estimated at USD 189.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
