Abstracts

Fluorite, also called fluorspar, is the common name of the mineral having chemical composition calcium fluoride (CaF₂). It is a mineral with veritable bouquet of brilliant colors from hallmark color purple to blue, green, yellow, colorless, brown, pink, black and reddish orange. The rich purple color is by far the most famous and popular color. It is an important commercial source of fluorine. Fluorite power plays a vital role in the manufacture of aluminium, gasoline, insulating foams, refrigerants, steels and uranium fuel. Fluorite is the common name of the mineral having chemical composition calcium fluoride (CaF₂). It is a mineral with veritable bouquet of brilliant colors from hallmark color purple to blue, green, yellow, colorless, brown, pink, black and reddish orange. Fluorite is commonly found in various geological environments and is often associated with minerals such as quartz, calcite, and barite. It is an important commercial source of fluorine. Fluorite is increasingly used in steel production, aluminum smelting, and other metallurgical processes due to its fluxing properties. At the same time, the rising demand for fluorochemicals, including hydrofluoric acid (HF) and refrigerants, is driving the fluorite industry. In addition, the application scope of fluorite is still expanding. For example, the demand for fluorite used in lithium-ion batteries and semiconductor industries is growing. Globally, the production of fluorite is mainly concentrated in China, Mongolia, Mexico, Europe and South Africa, among which China is also the largest consumer. Since 2021, the price of fluorite has fluctuated upward. Moreover, the price of fluorite has shown a more obvious trend of off-season and peak season with the change of seasons. In winter, the price of fluorite will be at a higher position, while the price at other times is at a relatively low point.

The global Fluorite Power market size was estimated at USD 3897.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
