Abstracts

Fluorocarbon surfactants are a specialized class of synthetic compounds characterized by a hydrophobic fluorocarbon chain and a hydrophilic head group, which significantly reduce surface tension in both aqueous and non-aqueous systems while offering exceptional chemical and thermal stability. These surfactants are distinguished from hydrocarbon-based counterparts by their fluorine-rich structure, which imparts unique properties such as high oil and water repellency, low friction, and resistance to degradation, making them particularly valuable in applications where extreme conditions or demanding performance criteria are present.

The global Fluorocarbon Surfactants market size was estimated at USD 1060.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
