Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fluoroolefin-vinyl Ether Copolymer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A fluoroolefin-vinyl ether copolymer, also known as FEVE, is a type of plastic made from alternating sequences of fluoroethylene and vinyl ether units. This structure gives it excellent weather resistance and durability, while the vinyl ether component makes it soluble in solvents and allows for it to be used in applications like high-performance paints and coatings. In 2024, global fluoroolefin-vinyl ether copolymer production reached 10,872 tons, with an average selling price of US\$10,895 per ton. Total capacity was approximately 21,600 tons, and the industry's gross profit margin was approximately 20%-30%. Cost structure: Direct materials accounted for approximately 70%, manufacturing costs approximately 20%, and labor costs approximately 10%. Industry chain: Upstream main raw materials are vinyl ether monomers, tetrafluoroethylene monomers, and chlorotrifluoroethylene monomers; downstream is the FEVE coating industry.

The global Fluoroolefin-vinyl Ether Copolymer market size was estimated at USD 118.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
