Report Overview

Fluoroplastics is a group of plastics where the molecules contain carbon and fluorine. The plastic polythene is a molecule consisting of a carbon chain with hydrogen atoms attached.

PTFE is much the same, but the hydrogen atoms are replaced with fluorine atoms. The replacement of the hydrogen atoms with fluorine atoms dramatically changes the properties of the material, and fluoroplastics therefore tend to have special properties, such as very high working temperatures, non-stick characteristics, very high resistance to chemical and solvents, very high electrical resistance, etc.

The more common members of the fluoroplastics family are: PTFE, FEP, PFA, ETFE, E-CTFE, PVDF and PVF.

Tube Fittings are designed to provide leak-free connections thus improving systems uptime and production. Valves, Connectors, Flanges, Flaring Tools, etc. are included.
