Abstracts

Fluororesin diaphragm pumps are positive displacement pumps that utilize a flexible diaphragm made of fluoropolymer materials such as PTFE, PFA, or FEP to handle highly corrosive, ultrapure, or aggressive fluids across industries including chemical processing, pharmaceuticals, semiconductor manufacturing, and wastewater treatment. These pumps are characterized by their leak-free operation, chemical inertness, and ability to maintain fluid purity, making them essential for applications where metallic or elastomer-based pumps would fail due to corrosion, contamination, or degradation. The diaphragm's reciprocating motion, driven mechanically, hydraulically, or pneumatically, enables precise fluid transfer, dosing, or metering while isolating the fluid from internal components, ensuring both operational safety and process integrity.

The global Fluororesin Diaphragm Pump market size was estimated at USD 215.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
