## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fluorosilicone Compounding Rubber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fluorosilicone compounding rubber is a special polymer material made by mixing fluorosilicone rubber (FVMQ) matrix with various additives (such as reinforcing agents, plasticizers, vulcanizers, antioxidants, etc.) at high temperature. It has both the high and low temperature resistance of silicone and the oil and solvent resistance of fluororubber. The material has excellent resistance to fuel oil, aviation hydraulic oil, aromatic hydrocarbons and polar solvents, while maintaining good elasticity and physical stability in the range of -60°C to +200°C. Fluorosilicone Compounding Rubber is widely used in aerospace, automotive engine seals, chemical pipelines, military equipment and other sealing and shock absorption occasions that require strict media compatibility. It is especially suitable for the manufacture of seals that need to be in contact with fuel, lubricating oil and organic solvents for a long time.

The global Fluorosilicone Compounding Rubber market size was estimated at USD 238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
