The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fluorosilicone Raw Rubber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fluorosilicone raw rubber is a basic polymer material made by polycondensation reaction with trifluoropropylmethylsiloxane as the main monomer without adding any filler or vulcanizer. It is an intermediate of fluorosilicone rubber (FVMQ) system. It has the high and low temperature resistance (-60? to +200?) of silicone rubber and the oil and solvent resistance of fluororubber, especially excellent chemical resistance to aviation fuel, lubricating oil, aromatic hydrocarbons and polar organic solvents. Fluorosilicone Raw Rubber is translucent or light yellow elastic block with adjustable viscosity. It is mainly used for secondary mixing and formula customization in the production of fine rubber products, such as aerospace, automotive engine systems, military seals and high-end industrial fields. It is a key raw material for the preparation of fluorosilicone compound rubber, liquid injection rubber and special modified silicone rubber.

The global Fluorosilicone Raw Rubber market size was estimated at USD 107.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
