## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flupentixol and Melitracen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Flupentixol and Melitracen is a fixed-dose combination psychotropic medication that includes low-dose flupentixol (a typical antipsychotic) and melitracen (a tricyclic antidepressant). Available in both tablet and capsule forms—typically containing 0.5mg flupentixol and 10mg melitracen per unit—it exerts anxiolytic, antidepressant, and mild activating effects. It is indicated for the treatment of mild to moderate depression, anxiety, neurasthenia, and psychosomatic disorders, especially in patients with fatigue, gastrointestinal discomfort, and sleep disturbances. With relatively rapid onset and good tolerability, it is widely used in outpatient psychiatry and primary care for short-term symptom relief. Currently, medications containing flupentixol and melitracen are widely used in the treatment of mild to moderate depression, anxiety, and psychosomatic disorders. They are especially popular in Asia (notably China and India) and parts of Europe, where their advantages—rapid onset of action, good tolerability, and high patient compliance—make them favored choices in both psychiatric and general medical settings. With rising awareness of mental health and increasing adoption of psychosomatic treatment concepts, this fixed-dose combination has emerged as a key "entry-level" therapy for mood disorders, particularly in community clinics and primary care facilities. Looking ahead, the market is expected to grow along two major axes. First, aging populations worldwide are leading to increased prevalence of neuropsychiatric comorbidities, especially in patients with chronic physical conditions such as hypertension and diabetes. Second, there is a global trend toward early detection and treatment of subthreshold or mild psychiatric disorders, which aligns with the profile of flupentixol/melitracen as a mild, convenient, and safe long-term option.

Furthermore, as emerging markets reduce their dependence on branded originators, the rise of local generic manufacturers is expected to enhance accessibility and drive broader adoption through price competitiveness. However, the development of this drug class faces several constraints. Despite its broad clinical use, some prescribers and patients remain wary due to the presence of a typical antipsychotic component, which may carry stigma associated with "psychiatric drugs." Additionally, newer antidepressants such as SSRIs and SNRIs continue to expand their market share with improved safety and broader indications, posing competitive pressure. In some regions, regulatory or marketing authorization barriers have also limited its availability, slowing international expansion efforts.

The global Flupentixol and Melitracen market size was estimated at USD 305.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.50% during the forecast period.
