Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flupentixol and Melitracen Tablets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Flupentixol and Melitracen tablets (e.g., Deanxit, Frenxit) are a fixed-dose combination of a low-dose thioxanthene antipsychotic (flupentixol 0.5?mg) and a tricyclic antidepressant (melitracen 10?mg) that work synergistically to treat mild-to-moderate depression, anxiety, asthenia, and psychosomatic disorders. Flupentixol antagonizes dopamine D₂/D₁ and other receptors to reduce agitation and mood swings, while melitracen inhibits serotonin and norepinephrine reuptake to elevate mood—offering anxiolytic, antidepressant, and activating effects with a generally favorable tolerability profile under short-term use.
