## Abstracts

A Fluteless Machine Tap is a specialized cutting tool designed for creating internal threads in a workpiece through a forming process rather than a cutting process. Unlike traditional taps that have flutes (grooves) for chip removal, fluteless taps are smooth and do not produce swarf (metal filings) during the tapping operation. Instead, they rely on the deformation of the material to form the threads.

The global Fluteless Machine Tap market size was estimated at USD 590.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
