Abstracts

Fly ash based green cement is a sustainable construction material that utilizes fly ash, a byproduct of coal combustion in thermal power plants, as a partial replacement for traditional Portland cement clinker, typically incorporating 20% to 35% or higher proportions of fly ash by mass; this substitution not only reduces the carbon footprint associated with cement production by lowering energy-intensive clinker requirements but also enhances long-term durability properties such as resistance to sulfate attack and alkali-silica reaction, while contributing to waste valorization and circular economy principles in the construction industry.
