Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fly Ash Portland Cement competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fly ash Portland cement is a hydraulic cementing material made from Portland cement clinker and an appropriate amount of gypsum as the base material, with a certain proportion of fly ash added and then ground together. Its characteristics include low hydration heat, good late-stage strength development, and superior durability. It can partially replace clinker and is widely used in mass concrete and general industrial and civil construction projects. The upstream supply chain mainly includes the supply of raw materials such as fly ash from coal-fired power plants, limestone, and gypsum, as well as electricity and mining and transportation services. The downstream market consists of ready-mix concrete companies, precast concrete manufacturers, and infrastructure, building construction, municipal, and water conservancy projects. The demand for low-hydration-heat and green, low-carbon building materials drives the consumption of this type of cement. In 2024, the global market price for fly ash blended Portland cement was US\$93 per ton, with sales of approximately 108.74 million tons. Global production capacity was 109-110 million tons, and the industry profit margin was 20-25%. Global Market Development Trends With the advancement of "dual carbon" goals and cement emission reduction policies in various countries, fly ash blended cement, due to its advantages in reducing clinker usage and CO₂ emissions, will gain greater importance in the green building materials system. Government green procurement and green building evaluation standards will continue to increase the proportion of fly ash blended cement used in public works and infrastructure. At the regional level, infrastructure construction in emerging economies remains the main source of growth, with strong demand for low-cost, durable cement in markets such as India, Southeast Asia, and the

Middle East and Africa. Developed regions will increase the proportion of this type of cement in existing building renovations, transportation, and municipal maintenance to improve durability and reduce life-cycle costs. In terms of technology, the utilization of high-activity fly ash and the synergistic incorporation of slag and limestone powder will further optimize early strength and long-term durability; at the same time, digital proportioning and quality control will improve product stability. Increased industry concentration and the coordinated production and carbon asset management of large cement groups will accelerate the development of fly ash blended cement towards standardization, branding, and high added value.

The global Fly Ash Portland Cement market size was estimated at USD 10112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
