## Abstracts

The flyaway satellite terminal is a small mobile communication system that integrates satellite communication equipment. It can be quickly deployed in any environment to provide users with instant satellite communication services. It is small in size, light in weight, and easy to carry. Users can operate it anytime and anywhere without being restricted by geographical location. Its advantage is that even in remote areas or when natural disasters cause the interruption of conventional communication networks, the portable satellite station can still ensure the stability and reliability of communication, provide effective communication support for rescue operations, remote expeditions, and outdoor operations, and ensure real-time transmission of information and timely response to emergencies.

The global Flyaway Satellite Terminal market size was estimated at USD 1207.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
