Abstracts

Flying probe testing systems are non-contact, automated test equipment used in the electronics manufacturing industry to perform in-circuit testing (ICT) and functional testing of printed circuit boards (PCBs) without requiring custom fixtures or physical bed-of-nails adapters. These systems utilize movable test probes to make electrical contact with test points on bare or assembled PCBs, enabling validation of component presence, orientation, value, and connectivity, as well as detection of shorts, opens, and other defects. Due to their flexibility, rapid setup, and suitability for low-to-medium volume production, prototyping, and high-mix environments, flying probe testers serve as a critical quality assurance tool, particularly where traditional fixture-based test methods are economically or logistically impractical.

The global Flying Probe Testing System market size was estimated at USD 220.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Flying Probe Testing System market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
