Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Flying Theatre Rides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Flying Theatre rides reached approximately 33,000 units, with an average selling price of \$72,952 per unit. A Flying Theatre is an advanced special theater amusement ride that combines motion platforms, dome projection, and immersive sound effects. Its core mechanism involves lifting the entire audience area into a suspended state using hydraulic or electric platforms, while synchronizing multi-degree-of-freedom motion simulations with film content to create realistic flying, gliding, and traversing experiences. This system is widely used in theme parks, tourist attractions, and large entertainment centers, and has become a popular medium-to-high capacity attraction in modern themed entertainment due to its unique immersion and moderate intensity. The current Flying Theatre market is experiencing steady growth alongside the global themed entertainment industry upgrade. Demand primarily originates from the construction of new theme parks, capacity expansion and quality improvement of existing attractions, and the replacement of outdated equipment with immersive rides in traditional film-based parks. The market competition is dominated by a few international giants with integrated solution capabilities, whose core competitiveness lies in precision motion control technology, customized film production capacity, and full life-cycle service systems. Future technological evolution will focus on improving the response accuracy and comfort of motion platforms, developing more creative and IP-related film content, while enhancing immersion through the integration of VR/AR technologies and environmental effects (such as wind, mist, and scents). Modular and energy-efficient designs, as well as reducing maintenance costs, will also become important directions for product iteration. However, balancing the high

equipment cost with the investment return period remains a key challenge for industry adoption.

The global Flying Theatre Rides market size was estimated at USD 2408.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
