Abstracts

FMOC protected amino acids are white or off-white crystalline solids that are insoluble in water but soluble in organic solvents. They can effectively protect amino groups. FMOC is an amino protecting group, the full name of which is 9-fluorenylmethoxycarbonyl. It is chemically stable, selective, and easy to remove. It is used to protect amino groups from oxidation or modification. FMOC protected amino acids are often used in solid phase synthesis. They are introduced into the peptide synthesis process as amino acid monomers. They have good chemical stability and biological activity and are widely used in the fields of medicine, food, and cosmetics. With the continuous advancement of biotechnology, the application of peptides in the field of biomedicine is becoming more and more extensive. Peptide drugs have shown great potential in many fields due to their high specificity, low toxicity and high efficiency. As the basic raw material of solid-phase peptide synthesis technology, the demand for FMOC protected amino acids has also increased accordingly. Except for an increase in the price of FMOC protected amino acids in 2021 due to the impact of exchange rates, the price has basically shown a downward trend year by year as the production capacity of various enterprises increases and the production scale expands. Global key FMOC Protected Amino Acids players cover Kelong Chemical, TACHEM, ZY BIOCHEM and GL Biochem (Shanghai) Ltd, etc. In terms of revenue, the global two largest companies occupied for a share nearly 24.30% in 2023. Geographically, Currently, Europe is the world's largest consumer market. In 2023, accounting for 38.12% of the global total sales volume. The second largest market is the Asia-Pacific region, which accounts for 34.02% of the global market share. America is the fastest-growing region, especially United States, which plays a more important role in the world. In terms of product types, FMOC-protected natural amino acids occupy a major market share, accounting for 79.06% of global sales in 2023. In the downstream application market, pharmaceutical products are the main application

field of FMOC-protected amino acids, and GLP-1 and other drugs will continue to drive the growth of the FMOC-protected amino acid market. In the next few years, the CAGR of the revenue market size in the pharmaceutical field will be 11.48%.
