Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Foam Core Material for Transportation competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Foam Core Material for Transportation is a lightweight, high-strength porous material based on polymers such as polyethylene terephthalate (PET), polyvinyl chloride (PVC), and polyurethane, and is made through physical or chemical foaming processes. Its closed-cell structure gives the material low density, high specific strength, excellent thermal insulation and sound insulation properties, and chemical corrosion resistance. It can be used as a core component of a sandwich structure and bonded between the surfaces of composite materials, significantly reducing the weight of vehicles and improving energy efficiency. At the same time, it improves ride comfort by blocking heat conduction and absorbing vibration and noise. It has been widely used in body structural parts of rail transit vehicles, lightweight components of aerospace vehicles, and sound insulation and heat insulation layers of road transportation equipment.

The global Foam Core Material for Transportation market size was estimated at USD 1530.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
