Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Interface Cushion Pad competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global annual sales of interface cushion pads are expected to reach approximately 22 million units, with an average unit price of approximately \$11. Interface cushions are a type of intermediate cushioning material used between the sandpaper and the workpiece surface of a sander or polisher. Typically made from high-density polyurethane foam, EVA, or other elastomers, they offer flexibility and cushioning properties, improving the fit between the sandpaper and the workpiece surface, thereby reducing vibration during sanding, avoiding overcutting, and improving the processing quality of curved surfaces and corners. This product is widely used in industries such as automotive paint repair, woodworking and furniture manufacturing, ship maintenance, and electronic housing polishing, and is a key consumable for achieving high-quality surface treatment. The upstream market primarily relies on polyurethane raw materials, EVA resin, adhesive backing materials, and Velcro fabrics; the downstream market encompasses auto repair shops, woodworking and furniture manufacturers, ship repair companies, and professional sanding and polishing tool manufacturers, forming a complete industrial chain spanning "chemical raw materials - consumables processing - surface treatment industry." Rupes has an annual production capacity of 3 million sheets, focusing on the high-end polishing and car detailing markets; and Harbor Freight has an annual production capacity of 2 million sheets, primarily serving small and medium-sized repair shops and the DIY market in North America.

The global Interface Cushion Pad market size was estimated at USD 242.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
