Abstracts

Foamed styro plastics, commonly known as expanded polystyrene (EPS) or extruded polystyrene (XPS), are lightweight, versatile polymer materials characterized by their cellular structure, which provides excellent thermal insulation, shock absorption, and buoyancy properties. These materials are widely used across industries such as construction (for insulation panels and void formers), packaging (for protective cushioning of fragile goods and food containers), and marine applications (in floating docks and buoys), owing to their cost-effectiveness, ease of molding, and moisture resistance. Despite increasing scrutiny over environmental impacts?particularly related to recyclability and persistence in ecosystems?demand remains robust, driven by their functional advantages and affordability in both mature and emerging markets.

The global Foamed Styro Plastics market size was estimated at USD 4300.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
