Abstracts

Focus tunable liquid lenses are adaptive optical devices that use one or more immiscible liquid layers with different refractive indices to dynamically alter their focal length and optical power through the application of external stimuli?most commonly voltage, pressure, or mechanical actuation?enabling rapid, precise, and often hysteresis-free adjustments without the need for moving mechanical parts. These lenses leverage phenomena such as electrowetting or liquid-liquid interface deformation to achieve tunability, offering advantages like compact form factors, low power consumption, fast response times, and seamless zoom or focus capabilities, making them suitable for applications where traditional solid lenses fall short in flexibility, speed, or miniaturization potential.

The global Focus Tunable Liquid Lenses market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
