Focused Ion Beam (FIB) Service is a high-precision micro/nano-processing and material analysis technology that uses a focused ion beam (typically gallium ions) to cut, deposit, image, and analyze samples. The FIB system combines ion beam milling with scanning electron microscopy (SEM) capabilities, enabling material processing and structural observation at the nanoscale. This technology is widely used in the semiconductor industry (e.g., chip circuit repair, failure analysis), materials science (e.g., nanomaterial fabrication, microstructure research), and biological sample preparation. The key advantage of FIB service lies in its ultra-high precision and versatility, allowing for micron- or even nano-scale processing while providing high-resolution imaging and elemental analysis. It is a crucial tool in advanced manufacturing and scientific research.

The global Focused Ion Beam Service market size was estimated at USD 647.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
