Report Overview:

Foil die cut lids refers to a type of packaging component used for covering and preserving various types of containers like boxes, pouches, jars, etc., which is created through a process known as foil stamping. This involves pressing an engraved metal surface against a sheet of foil to form an image or design onto its surface. The resulting raised relief creates a tactile impression visible and distinctive to touch. A layer of adhesive applied over the embossed area facilitates attachment directly onto the container top or by welding it to some secondary components, such as a disc, ring or inner cap, for enhanced tamper evidence prevention.

The Global Foil Die Cut Lids Market Size was estimated at USD 497.03 million in 2023 and is projected to reach USD 576.41 million by 2029, exhibiting a CAGR of 2.50% during the forecast period.
