Report Overview

A foldable smartphone is a form factor of smartphone, which allows access to a larger, tablet-like display when needed by unfolding the device, whilst maintaining a similar footprint and functionality to a standard smartphone when folded (typically along a vertical axis). The screen may either wrap around to the back of the device when folded (as with the Royole Flexpai and Huawei Mate X), or use a booklet-like design where the larger, folded screen is located on the interior, and a screen on its 'cover' allows the user to interact with the device without opening it (such as the Samsung Galaxy Fold). Foldable phones are the big new smartphone trend of 2019 (aside from 5G phones, of course, though some will be both). The Samsung Galaxy Fold and Huawei Mate X are the biggest two foldable phones announced, but the world's first foldable was actually the Royole FlexPai.
