Report Overview:

The application of the folder gluers is the final process of the packing box in the packaging and printing industry. It is a machine that takes a stream of flat open box material (called blanks) that has been produced by a die-cutter and transforms each box into a finished product by folding and gluing the boxes. The process involves folding and sticking printed, die-forming cardboard. Folder Gluers instead of manual gluing, reduce labour cost and improve efficiency.

Folder gluers can process a wide variety of box materials including folding carton, corrugated board, micro flute, and so much more, and are most popular in industries like printing, packaging, and envelope manufacturing. These machines run from anywhere between 200,000 to over a million, depending on how sophisticated the machine is. The variations depend on size limitations, capabilities, and print sections for flexo folder gluers. Industries that use these machines include packaging, printing, and envelope manufacturing. There are several different kinds of materials that can be used such as paperboard, corrugated board, plastic, metalized varnished boards, microflutes, and more. These materials are used to make boxes, envelopes, bottle holders, and much more. Paperboard and corrugated are the most common materials used in these machines.

The Global Folder Gluers Market Size was estimated at USD 328.13 million in 2023 and is projected to reach USD 439.72 million by 2029, exhibiting a CAGR of 5.00% during the forecast period.
