Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Folding Snow Shovel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of folding snow shovels was estimated at 8-12 million units, with an average selling price of approximately \$20-\$40 per unit and a gross profit margin of about 35%. Single-line production capacity was estimated at 300,000-400,000 units per year. A folding snow shovel is a snow shovel whose head, handle, and other components can be bent or disassembled through one or more joints, significantly reducing its size when not in use for easier storage and transportation. Its core feature is the "folding" action, designed to solve the problem of excessive space occupied by traditional one-piece snow shovels. The upstream supply chain for folding snow shovels mainly consists of the petrochemical industry (providing raw materials such as polypropylene and ABS engineering plastics) and aluminum/steel suppliers; the midstream involves production stages such as injection molding, metal pipe processing, electroplating and spraying, and final assembly and testing; and the downstream reaches end users through hardware tool chain stores, outdoor sports specialty stores, and e-commerce platforms. Its demand is characterized by typical "nature-driven" and "reserve consumption" features: on the one hand, it comes from the actual functional needs of residents in snowy areas to cope with daily snow removal, and on the other hand, it is composed of emergency procurement triggered by extreme weather events and the demand for supporting equipment for outdoor recreational activities (such as skiing and camping), forming a dual-power model of "basic rigid demand + climate pulse demand".

The global Folding Snow Shovel market size was estimated at USD 300.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
