Abstracts

A follow-up controller, also known as a servo controller or position servo controller, is a key component in an automatic control system. Its main function is to enable the actual position, speed or torque of the controlled object (such as a motor, hydraulic cylinder, etc.) to accurately follow the given command signal (also known as the target value or set value). In other words, the goal of the follow-up controller is to eliminate the deviation between the actual output and the expected output and keep the two as consistent as possible.
