Abstracts

The market for food antimicrobial coatings encompasses the development, production, and application of specialized surface treatments designed to inhibit or eliminate the growth of microorganisms?such as bacteria, fungi, and viruses?on food contact surfaces, packaging materials, and food processing equipment, with the primary objectives of extending shelf life, enhancing food safety, and reducing spoilage. These coatings are formulated using substances like silver nanoparticles, titanium dioxide, organic acids, or natural extracts (e.g., essential oils), and they can be applied through methods such as spraying, dipping, or incorporation into materials like polymers and films. The technology serves a critical role across the food supply chain, from manufacturing facilities (e.g., conveyor belts, cutting boards) to packaging (e.g., films, containers) and even direct application on certain perishable foods, addressing growing consumer and regulatory demands for safer, longer-lasting products while aligning with industry trends toward sustainability and reduced food waste.

The global Food Antimicrobial Coating market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
