Report Overview:

Defoamers are a key product in many industrial processes. Their use allows to increase the production capacity and the quality of the final products. Controlling and reducing the level of foam improves the performance of production processes as it allows the containers to be used to their maximum capacity, preventing overflows and facilitating pumping.

In the case of the food industry, it is common to use defoamers based on polydimethylsiloxane type silicone emulsions (food code E-900), which offer excellent results at low dosages, a high persistence of the defoaming effect and a high reliability in their effectiveness.
