Report Overview

Food Drying Machine is defined as a machine of heat under controlled conditions, to remove the water present in foods by evaporation to yield solid products. It differs from evaporation, which yields concentrated liquid products. The main purpose of drying is to extend the shelf-life of foods by reducing their in-water activity. Micro-organisms which cause food spoilage and decay and many of the enzymes which promote undesired changes in the chemical composition of the food are unable to grow, multiply or function in the absence of sufficient water.

The global Food Drying Machine market size was estimated at USD 1819.60 million in 2023 and is projected to reach USD 2612.36 million by 2032, exhibiting a CAGR of 4.10% during the forecast period.

North America Food Drying Machine market size was estimated at USD 508.05 million in 2023, at a CAGR of 3.51% during the forecast period of 2024 through 2032.
