## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Food-grade Anhydrous Dicalcium Phosphate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of food-grade anhydrous dicalcium phosphate was approximately 168,000 tons, with an average selling price of about US\$1,290 per ton. Single-line capacity was approximately 12,000 tons per year, with an average gross profit margin of 10-20%. Food-grade anhydrous dicalcium phosphate is a white, odorless, and tasteless powder or granules. It is an important food additive and calcium-phosphorus nutritional fortifier, mainly used in the food industry as a leavening agent, dough improver, stabilizer, emulsifier, and buffer. It is commonly used in baked goods, milk powder, and dietary supplements, providing calcium supplementation while exhibiting low hygroscopicity and stable properties. The upstream raw materials for food-grade anhydrous dicalcium phosphate mainly include phosphate rock, sulfuric acid (or thermal phosphoric acid), and calcium sources for neutralization (such as limestone or calcium hydroxide). Its downstream applications are wide-ranging, primarily as a nutritional fortifier and functional additive in the food industry (such as baked goods, infant formula, beverages, and dietary supplements).

The global Food-grade Anhydrous Dicalcium Phosphate market size was estimated at USD 217.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
